

## Full Stack Developer

### Description

We are looking for a passionate, talented, and motivated Senior Software Developer to join our team and help deliver high-quality technical solutions. If you're excited about working on the newest technologies and delivering value with the sense of ownership, then you should join us.

### Responsibilities

- Write clean code that follows industry standards and best practices.
- Participate in architectural discussions to improve our technology stack.
- Innovate ideas to promote best practices.
- Work closely with cross-functional stakeholders to make collaboration better between teams.
- Deliver high-quality and maintainable code using test-driven methodologies.
- Participate and contribute towards improving the development process and practices within the team and across the organization.

### Qualifications

- You will have a minimum of 3 years of industry experience developing on the full stack.
- Experience with CSS, HTML, Javascript.
- Experience with RESTful services.
- Knowledge and experience in building scalable Node.js applications.
- Continuous integration/continuous deployment experience.
- Experience with build tools such as webpack, grunt, gulp, babel etc.
- Strong desire to learn and share knowledge with others.

### Job Benefits

The fun part – Enjoy the benefits of Paytm food wallet, Cult fitness, Uber, Metro commuting benefits, Movie pass, Vacation time off, and much more. Never miss an exciting Hackathon which has been conducted annually for creative minds to showcase their talent and innovate solutions for worldwide problems through technology.

### Employment Type
